This programme introduces students to the study of financial institutions. It delves into Instruments, Corporate Financial Management and Strategy, as well as Portfolio Analysis and Financial Risk Management. It has three major themes – Finance, Economics and Quantitative Analysis. It offers an opportunity for further study into fields of Quantitative Methods and Economics that are relevant to Finance.

Students who pursue this programme will get a firm foundation for a career in the general field of finance. It is particularly appropriate for those who wish to work with financial institutions like banks, stock broking firms, investment houses and insurance companies. This programme also provides a strong foundation for students who wish to continue their studies at the Master or professional level, like the Chartered Financial Analyst (CFA) programme.
